CURING CABINET AND TANK

Both ASTM and EN specifications require the specimens to be left in the mould for the first 16 hours up to a maximum of three days, protected against shock, vibration and dehydration at a temperature from $20 \pm 5^\circ \text{C}$ or $25 \pm 5^\circ \text{C}$ in hot climates (EN method) and 16 to 27°C (ASTM method). After the removal from the moulds the specimens have to be stored in a moist condition at $20 \pm 2^\circ \text{C}$ (EN) or $23 \pm 1.7^\circ \text{C}$ (ASTM) with a relative humidity $\geq 95\%$. Alternatively they can be cured in water at the same temperature.
