

# BLADE PREPARATION MELTER TPEM-2

The blade preparation melter TPEM-2 is used to melt sample before the bitumen breaking point test. It consists of a heating plate, a water cooling device and a control device with an intelligent digital display temperature controller.

## FEATURES

- It uses a digital temperature controller for automatic control, with high measurement accuracy.
- Adopts flat heating, which heats up quickly.
- It can be connected to external circulating water, and can quickly cool down through heat exchange.
- The copper sheet is sucked by a permanent magnet, and the flat surface is attracted by magnet, so it does not slide when pouring samples.

## TECHNICAL SPECIFICATIONS

Heating power	450W
Power supply	220V 50Hz
Dimensions	240×350×260mm
